

RDBMS01-03 – Session I,II,III

JAGANNATH CHAUDHARY – 24 NOV 2019

1. Problem Statement

Task 1:

Use the Sakila schema, which can be found in the following link (to be installed in your local system)

[https://drive.google.com/open?id=0ByJLBTmJojzSTk4aXhvWVA1b1E\("sakila database"\)](https://drive.google.com/open?id=0ByJLBTmJojzSTk4aXhvWVA1b1E(\)

<http://dev.mysql.com/doc/sakila/en/sakila.html>(for full documentation)

Requirements:

For each question, you are required to provide the following:

- The SQL query you used
- The answers
- Any assumptions you made

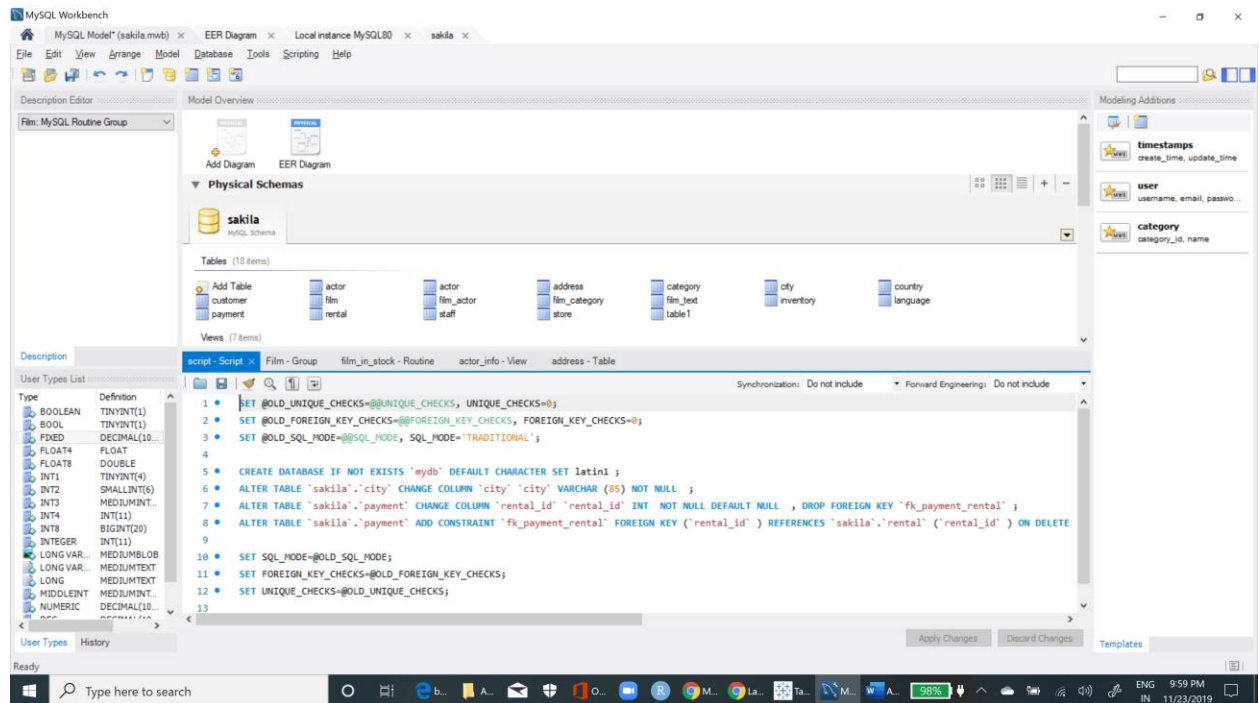

Set up/Install the database sakila. The database will be used for the next MySQL Assignments as well. Refer the Links given above for help in setting up the database.

Solution: worked on mysql workbench ver 8

I followed the below steps

1. Set up the Sakila Database from the link provided and referred to online blogs as well as github for better understanding.
2. Studied the ERR diagram to understand the database and inter relations. The database consists of three parts:
 - a. Inventory (Movie Database) : includes eight tables
 - b. Customer Data (Customer Related Data) : includes four tables
 - c. Business (Data required to run the business) : includes four tables

The interrelation and dependencies were identified

3. Connected to the DBMS after opening the 'Sakila-schema'
4. Connected to the DBMS after opening the 'Sakila-data'
5. Using Sakila-data
 - a. USE Sakila
 - b. Created tables
 - i. Actor
 - ii. Film_Text
 - iii. Language
 - iv. Film_category

- c. Created tables in the sequence
- Country
 - City
 - Address

d. Created Staff table (after removing CONSTRAINT fk_staff_store FOREIGN KEY (store_id) REFERENCES store (store_id) ON DELETE RESTRICT ON UPDATE CASCADE,)

e. Created store table

6. Using Sakila-schema

a. Inserted values in the table 'store'

7. Using Sakila-data

a. Altered the Staff table

alter table staff add CONSTRAINT fk_staff_store FOREIGN KEY (store_id) REFERENCES store (store_id) ON DELETE RESTRICT ON UPDATE CASCADE;

b. Created tables in the sequence

- i. Film
- ii. Customer
- iii. Inventory
- iv. Rental
- v. Payment

c. Created tables

- i. Film_actor
- ii. Category

8. Using 'Sakila-schema' Inserted values in the tables

Task 2:

1. What are the names of all the countries in the databases which start with the letter "B"
2. Return the first names (sorted) of all the actors with the last name "berry".
3. Find all the films whose length is more than 184 (inclusive). Order the results by the length (and for films with the same length order them by their name). Return their title and the length.

#to get all the films whose length is more than 184 (inclusive) and Order the results by the length And Return their title and the length.we are using film table from sakila database here MySQL> SELECT title,length FROM sakila.film WHERE length >=184 ORDER BY length;

Solution:

Assignment 26

1. What are the names of all the countries in the databases which start with the letter "B" (sorted by their names)?

The SQL query you used

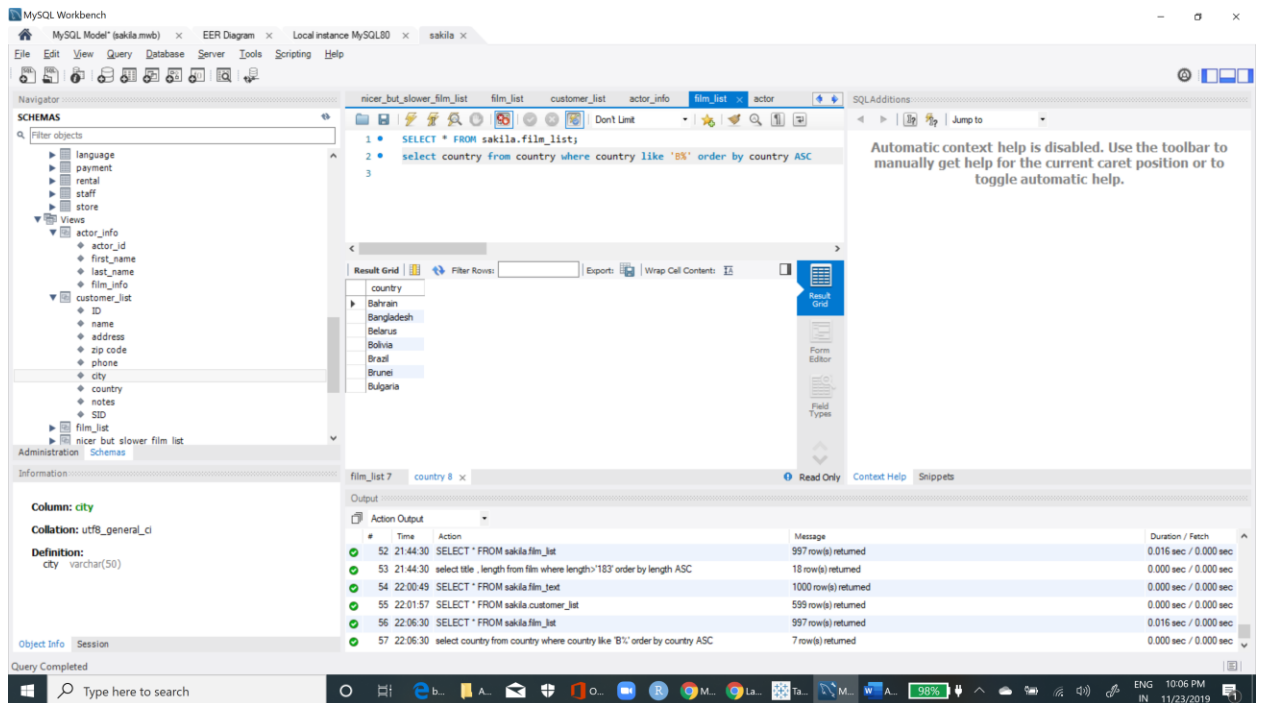

```
select country from country where country like 'B%' order by country ASC;
```

The answers

country
Bahrain
Bangladesh
Belarus
Bolivia
Brazil
Brunei
Bulgaria

Any assumptions you made

Nil

- Return the first names (sorted) of all the actors with the last name "berry".

The SQL query you used

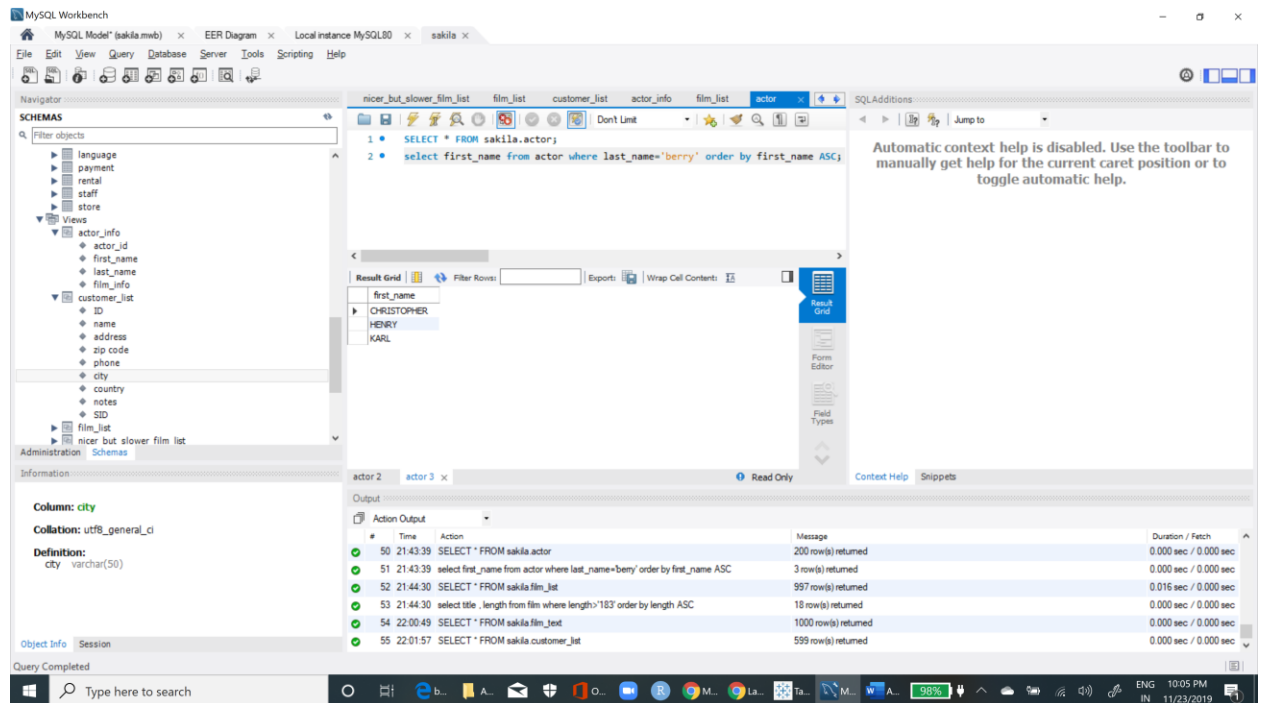

```
select first_name from actor where last_name='berry' order by first_name ASC;
```

The answers

first_name
CHRISTOPHER
HENRY
KARL

Any assumptions you made

Nil

- Find all the films whose length is more than 184 (inclusive). Order the results by the length (and for films with the same length order them by their name). Return their title and the length

- The SQL query you used

`select title , length from film where length>'183' order by length ASC;`

- The answers

Title	length
CONSPIRACY SPIRIT	184
CRYSTAL BREAKING	184
KING EVOLUTION	184
MOONWALKER FOOL	184
SMOOCHY CONTROL	184
SONS INTERVIEW	184
SORORITY QUEEN	184
THEORY MERMAID	184
CHICAGO NORTH	185
CONTROL ANTHEM	185

DARN FORRESTER	185
GANGS PRIDE	185
HOME PITY	185
MUSCLE BRIGHT	185
POND SEATTLE	185
SOLDIERS EVOLUTION	185
SWEET BROTHERHOOD	185
WORST BANGER	185

System by default order by name where the length is same.

The screenshot shows the MySQL Workbench interface. The query editor contains the following SQL query:

```
1 • SELECT * FROM sakila.film_list;
2 • select title , length from film where length>'183' order by length ASC;
```

The result grid displays the following data:

title	length
SORORITY QUEEN	184
THEORY MERMAID	184
CHICAGO NORTH	185
CONTROL ANTHEM	185
DARN FORRESTER	185
GANGS PRIDE	185
HOME PITY	185
MUSCLE BRIGHT	185
POND SEATTLE	185
SOLDIERS EVOLUTION	185
SWEET BROTHERHOOD	185
WORST BANGER	185

The bottom panel shows the query execution log with the following entries:

#	Time	Action	Message	Duration / Fetch
50	21:43:39	SELECT * FROM sakila.actor	200 row(s) returned	0.000 sec / 0.000 sec
51	21:43:39	select first_name from actor where last_name='beny' order by first_name ASC	3 row(s) returned	0.000 sec / 0.000 sec
52	21:44:30	SELECT * FROM sakila.film_list	997 row(s) returned	0.016 sec / 0.000 sec
53	21:44:30	select title , length from film where length>'183' order by length ASC	18 row(s) returned	0.000 sec / 0.000 sec
54	22:00:49	SELECT * FROM sakila.film_text	1000 row(s) returned	0.000 sec / 0.000 sec
55	22:01:57	SELECT * FROM sakila.customer_list	599 row(s) returned	0.000 sec / 0.000 sec

Task 3:

1. Return the categories (names) of the longest film. NOTE that there may be several "longest" films (i.e. with the same length), so you might need to return more than one category. Return the duration as well.

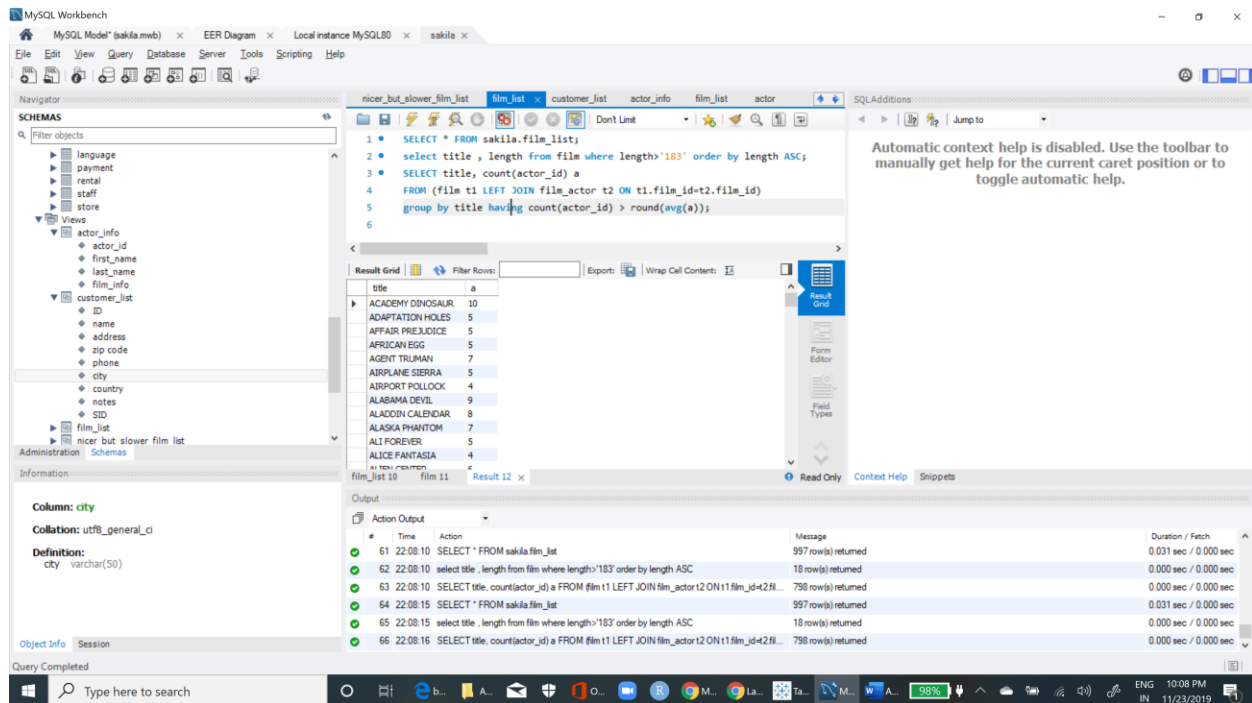

Find the movies whose total number of actors is above the average. Return the movie names and its number of actors ordered by the title. IMPORTANT NOTE: this query should return many movies. Please write in your submission only the first TOP-10 results.

The syntax Used

```
SELECT title, count(actor_id) a
FROM (film t1 LEFT JOIN film_actor t2 ON t1.film_id=t2.film_id)
group by title having count(actor_id) > round(avg(a));
```

The results

title	A
ACADEMY DINOSAUR	10
ADAPTATION HOLES	5
AFFAIR PREJUDICE	5
AFRICAN EGG	5
AGENT TRUMAN	7
AIRPLANE SIERRA	5
AIRPORT POLLOCK	4
ALABAMA DEVIL	9
ALADDIN CALENDAR	8
ALASKA PHANTOM	7

2. Find the movies whose total number of actors is above the average. Return the movie names and its number of actors ordered by the title. IMPORTANT NOTE: this query should return many movies. Please write in your submission only the first TOP-10 results. \3. Who is the customer who spent the most on rental movies? Return his/her customer id, first name and the amount spent.

The Syntax Used

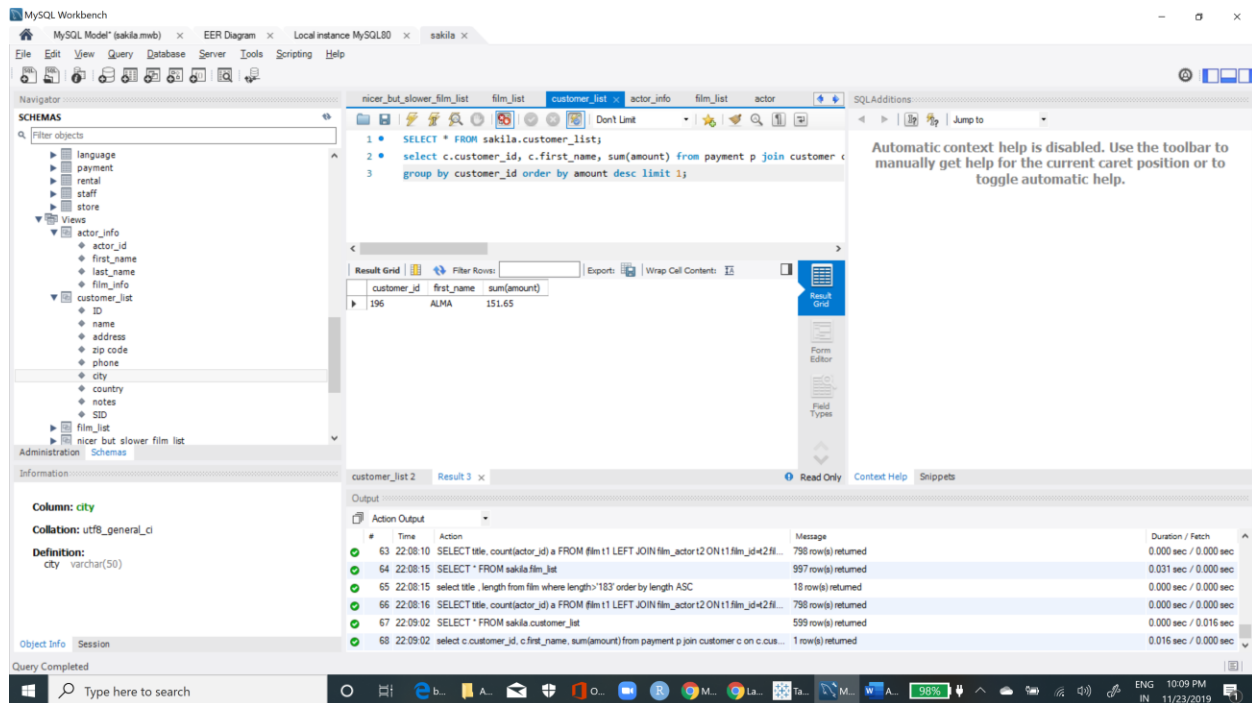

```

select c.customer_id, c.first_name, sum(amount) from payment p join customer c on
c.customer_id=p.customer_id group by customer_id order by amount desc limit 1;

```

The Results

customer_id	first_name	sum(amount)
196	ALMA	151.65

4. Give an interesting query of your own that is not already in the assignment. The query should involve at least two joins, HAVING clause and aggregation operation. Give the English explanation and the answer.

Query : Return film titles from Canada sorted by amount (Costly films in Canada)

`select title, sum(amount), country from payment p join (inventory i, staff s, film f, address a, city t, country y) on`

`(i.film_id = f.film_id and i.store_id = s.store_id and p.staff_id = s.staff_id and s.address_id=a.address_id and a.city_id=t.city_id and t.country_id=y.country_id)`

`group by title having country = 'canada' order by sum(amount) DESC;`

In earlier assignments we have found popular countries wherein Canada was most popular country.

Hence here I tried to find the costlier movies in the Canada assuming the amount in payment table is the cost for the movies.

In order to get this I identified tables having 'film titles', 'amounts' and 'countries' which are 'film', 'payment' and 'country' respectively.

To join these tables identified the inter dependencies and common columns.

Since we need the cost of each film the results were grouped by 'title' and all the payments were summed as sum(amount) .

To find the costlier movie results were sorted with sum(amount) in descending order.

Since we have condition of movies in Canada having clause is used .

The screenshot shows the MySQL Workbench interface. The query editor contains the following SQL query:

```
1 select title, sum(amount), country from payment p join (inventory i, staff s, film f,  
2 (i.film_id = f.film_id and i.store_id = s.store_id and p.staff_id = s.staff_id  
3 order by sum(amount) DESC)  
4
```

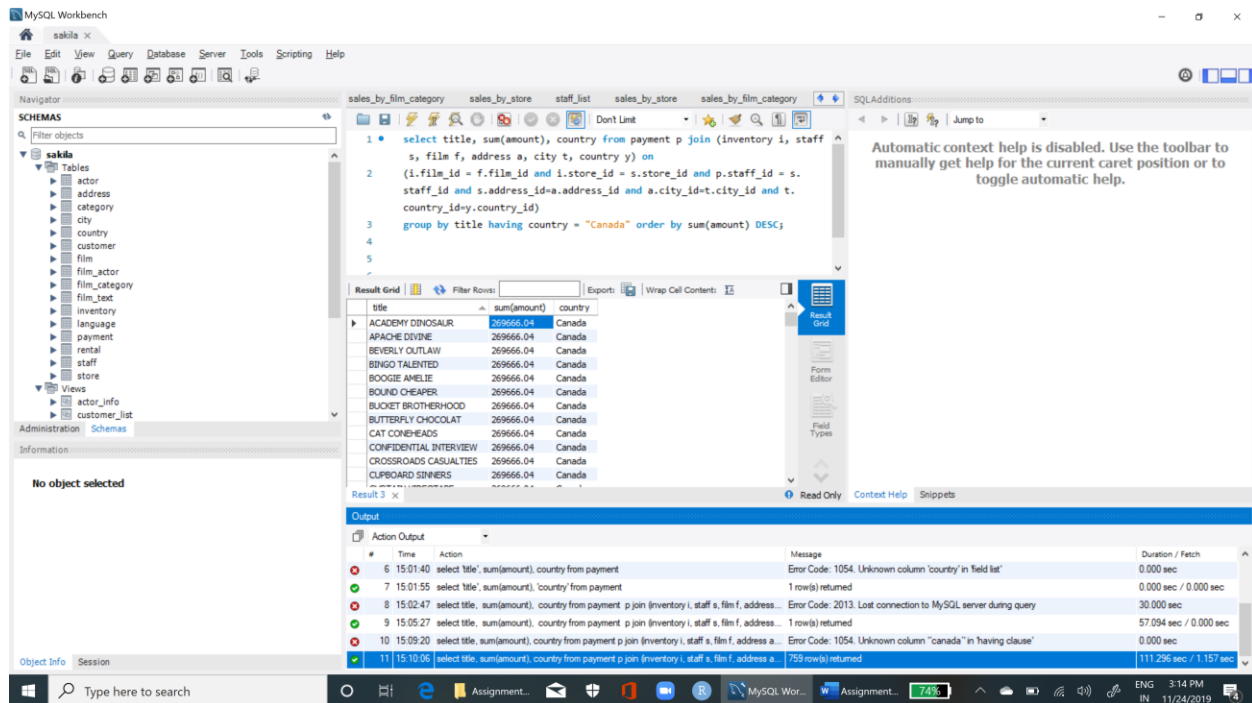

The result grid shows one row of data:

title	sum(amount)	country
ACADEMY DINOSAUR	154426486.34	Canada

The output pane shows several error messages:

- 1 23:11:18 select title, sum(amount), country from payment p join (inventory i, staff s, film f, address a, ... Error Code: 1054. Unknown column "canada" in having clause' 0.000 sec
